

## Hydrangea Box Notes

© 2018 Meenakshi Mukerji

**Lid:** Make Shuzo Fujimoto's Hydrangea, 3 levels or higher. The first two levels will make the rim of the box and the rest will be at the top.

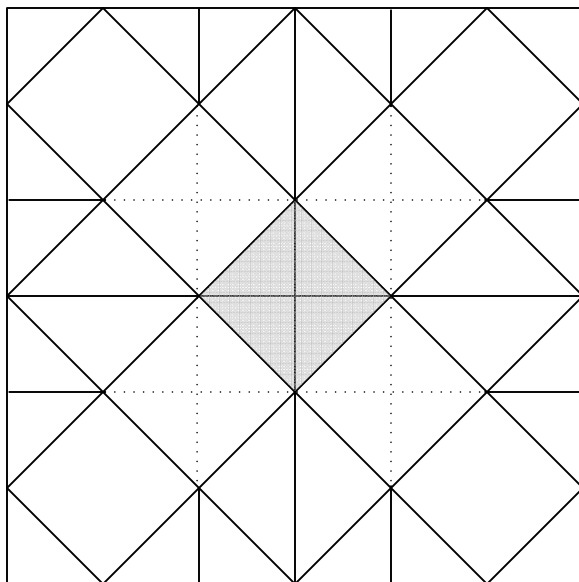

**1.** Fold the red lines as mountains firmly and unfold.

**2.** Pre-crease the redline. Fold the corner as shown. Unit now becomes 3D and square now becomes right triangle. Fold the triangle in half using red line. Now tuck the resulting flap under the existing petal shaping flap. Repeat for all four corners to complete lid.

**Base:** Use same size paper as lid. I like a contrasting color because it shows off the lid better. The shaded region will be the bottom of the box.

**1.** Pre-crease into thirds both ways. It is best to not crease the parts shown dotted for a neater finish but it is difficult to estimate.

**2.** Pre-crease the diagonals shown.

**3.** Blintz fold two opposite corners and finish like a Masu Box using existing creases.

Note: There are overlaps in the box base that is not necessarily bad. It makes the box sturdy.
